GE HealthCare
Omni Legend
21 PET/CT**

Now available exclusively at the state-of-the-art brand new South Coast Radiology Nuclear Medicine Imaging Centre, located at 147 Smith Street, Southport.

Answers at the speed of sight

Introducing Omni Legend

As the first system built on GE HealthCare's all-digital platform, Omni Legend was designed to deliver exceptional images while also making vast improvements to the entire scanning process.

The remarkable digital detector design and innovative deep learning technology* make it an industry-leading platform with exemplary diagnostic confidence now and in the future. The remarkable digital detector design at its core delivers high resolution, as well as an unparalleled increase in true NEMA sensitivity, delivering the highest sensitivity per centimeter in the market.¹

This is the start of a whole new era of PET/CT!

Omni Legend takes the possibilities of Precision DL* even further because it also includes Q.Clear image reconstruction technology (BSREM) and MotionFree, the proven, deviceless respiratory motion correction technology. Q.Clear helps to ensure reliable quantification, while MotionFree operates seamlessly in the background to correct respiratory motion artifacts for all patient types.

Experience the latest innovation and market-leading technology with South Coast Radiology at our Nuclear Medicine Imaging Centre, Southport.

Greater sensitivity leads to faster scan times, lower dose and delivers better lesion detectability.

- See Small Lesions
- Highest Sensitivity
- Ultra-Fast Scanning
- All new Precision DL image processing technology enabled by deep learning
- AI-enhanced workflow
- Improved Patient Comfort
